Basic calculus explains about the two different types of calculus called "Differential Calculus" and "Integral Calculus". Differential Calculus helps to find the rate of change of a quantity whereas integral calculus helps to find the quantity when the rate of change is known. Important Calculus Topics:

Introduction to Calculus (Differential and Integral Calculus)

The differential and Integral calculus deals with the impact on the function of a slight change in the independent variable as it leads to zeros. Furthermore, both these (differential and integral) calculus serves as a foundation for the higher branch of Mathematics that we know as "Analysis."

BASIC CONCEPTS OF DIFFERENTIAL AND INTEGRAL CALCULUS

The fundamental concepts and theory of integral and differential calculus, primarily the relationship between differentiation and integration, as well as their application to the solution of applied problems, were developed in the works of P. de Fermat, I. Newton and G. Leibniz at the end of the 17th century.

Differential and Integral Calculus - Online mathematics ...

Differential calculus and integral calculus are connected by the fundamental theorem of calculus, which states that differentiation is the reverse process to integration. Differentiation has applications to nearly all quantitative disciplines.

Differential calculus - Wikipedia

Differential calculus deals with the study of the rates at which quantities change. It is one of the two principal areas of calculus (integration being the other). Start learning

Applications of differential calculus include computations involving velocity and acceleration, the slope of a curve, and optimization. Applications of integral calculus include computations involving area, volume, arc length, center of mass, work, and pressure. More advanced applications include power series and Fourier series.

Differential calculus is basically dealing with the process of dividing something to get track of the changes. On the other hand, Integral calculus adds all the pieces together. Differentiation deals with the calculation of a derivative which is the instantaneous rate of change of function taking into one of its variables into consideration.
